EDUCATION

B.S. Software Engineering, University of Puerto Rico–Mayagüez

GPA: 3.2

Expected 12/2026

Mayagüez, Puerto Rico

EXPERIENCE

Cyber Threat Intelligence & AI Engineering Intern, Evertec

06/2026 – 08/2026

- **Built ARGUS**, an AI-assisted OSINT platform integrating the Recorded Future API to enrich IPs, domains, hashes, URLs, malware, emails, and usernames with risk scores and MITRE ATT&CK-mapped threat intelligence — cutting a threat-intelligence briefing process that previously took hours to days down to minutes.
- **Designed a Pydantic AI agent** (CLI + web GUI) orchestrating entity resolution, enrichment, and a policy-driven corroboration layer across **14 OSINT integrations**, including Shodan, VirusTotal, AbuseIPDB, WHOIS, DNS, and GitHub.
- **Engineered a deterministic source-verification layer** that extracts and cites API-derived facts independently of the LLM, eliminating hallucinated claims and making every statement in generated briefings independently auditable.
- **Automated STIX 2.1 bundle generation** and Word (.docx) threat-report exports aligned with Traffic Light Protocol (TLP) intelligence-sharing standards.

Full Stack Software Engineer Intern, LeadWire LLC

05/2024 – 08/2025

- **Engineered real-time dashboard updates** using WebSockets and aggregated stats tables, enabling instant metric refreshes across large datasets.
- **Improved dashboard performance** by optimizing GraphQL queries and building SQL aggregate tables, cutting load times from 30+ seconds to 10–15 seconds.
- **Modernized the platform stack** — upgraded Node.js, React, Apollo Client, and Material UI, and migrated build tooling to Vite — improving maintainability and development speed.
- **Led a UI redesign** across the dashboard, navigation, and modals, improving usability, consistency, and responsiveness.

Associate Software Engineer Intern, Red Ventures Puerto Rico

05/2023 – 08/2023

- **Shipped front-end and back-end features** across multiple production websites with the Platea team, using WordPress, Twig, Timber, and PHP on the front end and Prisma and NestJS on the back end.
- **Increased content engagement** by implementing a “Save” feature and building the supporting API for user-generated lists.
- **Drove A/B testing initiatives** by coding two content gates, optimizing user interaction and refining conversion pathways.
- **Extended full-stack ownership** to an additional site by building features in React and TypeScript.

Software Engineering REU, The Arecibo Observatory

05/2022 – 08/2022

- **Independently developed a proof-of-concept MERN stack web application**, under mentor guidance, surfacing real-time data from the 12m Radio Telescope, alongside a logging tool for operational data collection.

PROJECTS

AI Performance Analytics Platform for Esports

01/2026 – 05/2026

capstone-esports.vercel.app

- **Built a full-stack esports analytics platform** (FastAPI, PostgreSQL, Next.js) normalizing Riot Games match data across 12 database tables, achieving 99.5% metric-computation coverage across 36,800+ participant-match records.
- **Trained and evaluated seven machine learning models** (XGBoost, Logistic Regression, Ridge Regression) for win prediction, regression, and clustering, achieving $R^2 = 0.87$ for CS/min prediction and AUC-ROC = 0.83 for early-game outcome prediction.

Synthetic Radio Frequency Interference Generator for the K-band

08/2025 – 05/2026

github.com/jorgeortiz41/RFIGenerator

- **Built a synthetic RFI generator** with GUI/CLI in Python for K-band radio science research, modeling real-world RFI sources and generating research datasets.
- **Studied radiometric data and published RFI models** to inform model design; presented progress at the Industrial Affiliates Program Fall Event.

AI-Powered Academic Course Management & Analytics Platform

08/2025 – 12/2025

github.com/jorgeortiz41/fall2025v2-platano_db

- **Built a full-stack academic data platform** (PostgreSQL, ETL pipeline, Flask REST API) with interactive analytics dashboards.
- **Integrated a retrieval-augmented (RAG) AI chatbot** using pgvector and Ollama to answer natural-language questions from course syllabi.

SKILLS

Languages: Python, Java, JavaScript, Go, PHP, HTML, CSS

AI / LLM Engineering: Pydantic AI, Prompt Engineering, RAG, Agentic Workflows, LLM Orchestration

APIs & Integration: REST APIs, GraphQL, WebSockets, Third-Party API Integration

Frameworks & Libraries: React, Next.js, Express, Prisma, Tailwind CSS, Material UI, Framer Motion, WordPress

Cloud & Databases: AWS, Vercel, Heroku, PostgreSQL, MySQL, MongoDB

Foundations: Data Structures & Algorithms, OOP, Digital Design, Software Design & Testing, Assembly
